

Water Screen Nozzle

Description - The Water Screen jet is designed to create a screen of water suitable for projecting an image / movie or a laser on it for special show fountains. The unique design ensures that the pumping capacity required to produce the water screen is much lower than conventional water screen jets.

Size - Available with 50mm or 75mm inlets and Screen Radius of 3m or more depending upon the pump used.

MOC - SS, Machined Brass & Cast Bronze.

Custom - This is a specialized jet and is only custom built.
